Portfolio website

PRO SKILLS

Python, Gen AI, Pandas, Numpy

Machine Learning, Postman, GraphRAG

Responsible AI, Matplotlib, DeepEval

CV, Flask, Fast API, SQL, Snowflake

NLP, MLOPs, GIT, Github, Docker, aws

SciPy, Scikit-learn, PIL, Kubernetes

TensorFlow, Keras, PyTorch, kiro

GCP, Bigquery, Vertex AI, Spark

LangGraph, Crew AI, Autogen, cursor

LANGUAGE

English

Hindi

Tamil

Kannada

Career Objective

To secure a strategic Data Scientist position that allows me to leverage my expertise in Generative AI, Machine Learning, advanced analytics to develop impactful, innovative solutions within a forward-thinking organization and seeking opportunities

Professional Summary

- **Senior Data Scientist**: Highly skilled and results-oriented Data Scientist with 6 years of experience, including a 3+ year specialization in cutting-edge Generative AI development
- **Generative AI Expertise**: Hands-on experience designing and integrating advanced Generative AI solutions, leveraging state-of-the-art platforms like Gemini 3 pro, 3 flash GPT-5/GPT-5.1, and Claude. Proficient in LangChain, Vector Databases (Pinecone/Weaviate), and RAG (Retrieval-Augmented Generation) architectures.
- **Machine Learning:** Designed and deployed a fully automated, end-to-end machine learning forecasting pipeline to predict the QI Media Value Index for sports television broadcast data. Designed a scalable data ingestion and preprocessing workflow using Amazon S3 for data storage and versioning, implemented model training workflows in AWS SageMaker, and operationalized the solution with reproducible training pipelines.
- **Business Transformation:** Proven track record of leveraging Generative AI & Machine Learning to solve complex, real-world business challenges.
- **Full-Stack AI Development:** Solid foundation in classical Machine learning and Computer Vision. Experienced with MLOps practices, including Docker, Kubernetes, and cloud platforms (AWS SageMaker, GCP Vertex AI) for scalable AI applications.

6 LLM's used for various projects

5 POC's built in ML

3 renewable energy projects in production

1 LLM finetuned

Experience

Nielsen | Bengaluru — MAR'2025 – FEB'2026

Senior Data Scientist – Audience Measurement

- Architected an Autonomous Multi-Agent System using LangGraph and Playwright to automate end-to-end validation of complex market research surveys. Orchestrated a swarm of specialized agents (Researcher, Navigator, Healer) to simulate user behavior, achieving 100% logic coverage across global markets.
- Designed and deployed a scalable end-to-end ML forecasting pipeline on LightGBM using Amazon S3 for data storage and Amazon SageMaker for training and deployment to predict the QI Media Value Index for sports TV broadcast data, achieving 5% MAPE.

Honeywell | Bengaluru

Data scientist II – VE/CE COE — APR'2024 – FEB'2025

- Drove the development and implementation of advanced Analytics, ML & GenAI solutions within Honeywell's VE/CE CoE, with a focus on optimizing supply chain and component engineering workflows.

- Successfully executed projects leveraging Google cloud platform and Vertex AI processes, snowflake for training and deployment of models. Collaborated on pioneering projects pushing the boundaries of AI-driven VE/CE Assist applications.
- Mentored and guided a high-performing team of Junior Scientists /interns and AI engineers, fostering a collaborative and innovative environment driving operational efficiency and improving product design outcomes within the VE/CE CoE.

Volvo Trucks | Bengaluru MAY'2021 – MAR'2024
Data scientist – Associate

- Data Scientist contributing to strategic AI initiatives with hands-on, end-to-end ML & GenAI experience. Designed ML pipeline for predicting Fuel Efficiency and used the model coefficients for driver training achieving 6% increase in Fuel efficiency and reduced carbon emissions.
- Collaborated closely with Lead Data Scientists, providing critical support across the entire project lifecycle – from initial Proof-of-Concept creation and meticulous data cleaning, feature engineering, model building, fine tuning to in-depth market research and deployment.
- Successfully completed projects across classical ML (DRIVE, MILE) delivering tangible business results including a 20% reduction in customer costs and significant improvements in fuel efficiency

---

Dual Globe solutions | Chennai MAR'2020 – MAY'2021
Data scientist – Junior

- Collaborated with product teams assisting in the collection, analysis, and interpretation of data. Worked under guidance of senior data scientists performing data cleaning and preparation, implementing statistical models, and visualizing data and Data mining.
- Designed and developed a simple dynamic Machine learning web app for predicting and categorising house images using Microsoft coco transfer learning model, highlighting an ability to work with image and spatial data types (relevant to LiDAR/PV data analysis).

Beyond the Curriculum/Acheivments

MAY'2024 – OCT'2024

Google Gemini API Developer Competition | Gen AI development Architect
The Avarta Life app on environmental protection got most popular votes and stood in top10
led the development of Avarta Life, a groundbreaking recycling app, as part of the Google Gemini API Developer Competition, Successfully leveraged the Gemini API to create innovative features including image recognition, environmental impact assessment, and AI-powered chat functionalities.
Avarta life link - avarta life - GEN AI powered recycling

AI/ Mathematics Content creator

- Engaged a broad audience as a Math/AI YouTuber, translating intricate mathematical theories and AI principles into easily digestible and practical video content.
- Created a range of educational videos covering core concepts such as CNNs, linear algebra, vectors, and foundational math like functions and matrices, making AI and mathematics more accessible and understandable.

Education

Postgraduate Program in Artificial Intelligence, Imarticus Learning 2020–2021
Master of Engineering in Mechatronics 2018–2020
Bachelor of Engineering in Mechanical 2014 –2018
